

Assignment 1

Elliot Spears

Question 1

For selfish reasons, I simply want to find out which airline has had both the most cancellations and the most delays over the years so that I can avoid flying with them.

Cumulative Cancelled Flights by Airline

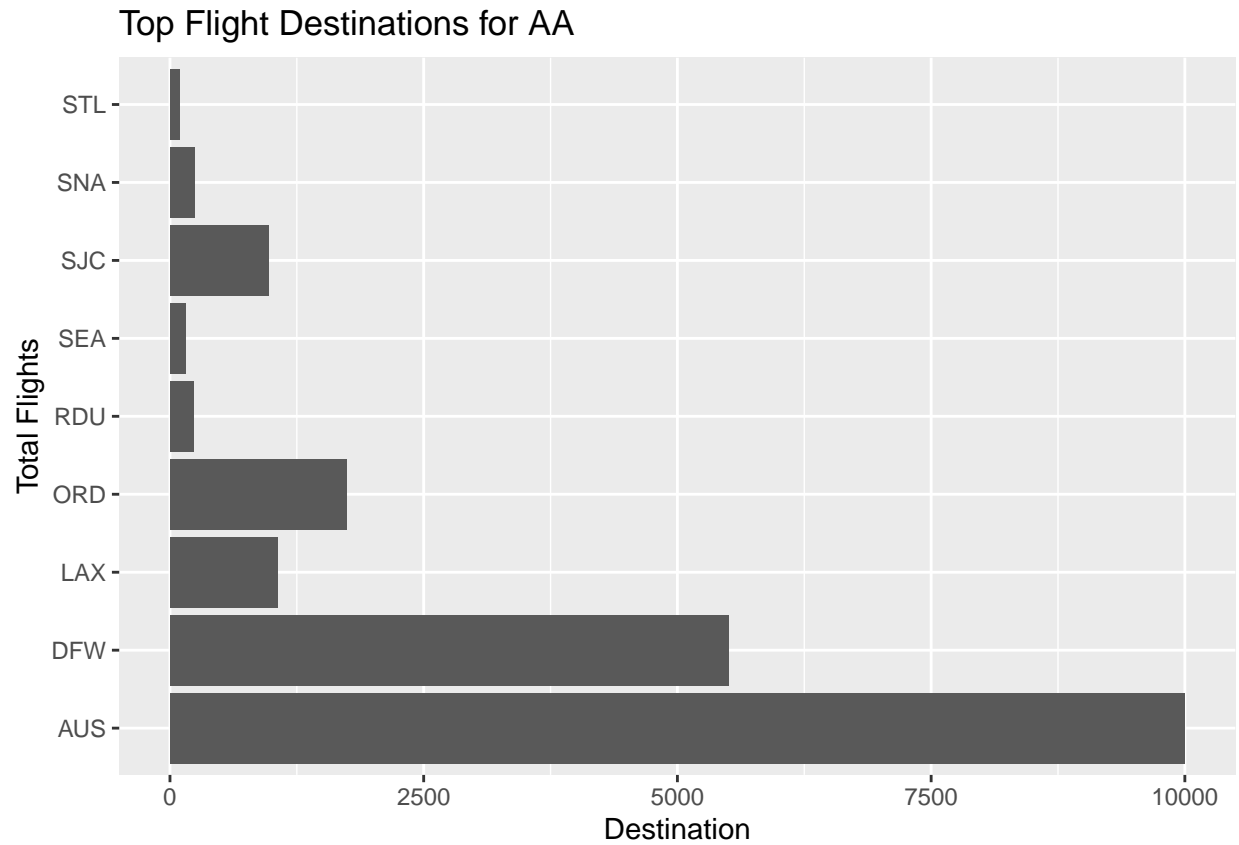

American Airlines has a shockingly large amount of total cancellations compared to other airlines.

Cumulative Cancelled Flights by Destination

El Paso, TX has the most cancellations, along with San Francisco, CA and Nashville, TN.

It appears that neither El Paso, nor San Francisco, nor Nashville appear on the most frequent destinations for AA, which would have explained their disproportionately high amount of cancellations.

Cumulative Delay Time by Airline

American Airlines has by far the most cancellations of any airline and the second most cumulative carrier delay time. This second place is much larger than the airline that took third place in carrier delay time. This data suggests that I should avoid American Airlines.

I attempted to test whether these issues with AA flights being delayed and cancelled so often can be explained by the destinations AA flies to most often. The plots above show the destinations with the most cancellations, none of which appear on the list of destinations AA flies to most often. Hence, I don't have a good explanation for their shortcomings. All I can conclude with the information I've dug up is that I'll continue to fly United.

Question 2 Part A)

Performer	Song	Count
Imagine Dragons	Radioactive	87
AWOLNATION	Sail	79
Jason Mraz	I'm Yours	76
The Weeknd	Blinding Lights	76
LeAnn Rimes	How Do I Live	69
LMFAO Featuring Lauren Bennett & GoonRock	Party Rock Anthem	68
OneRepublic	Counting Stars	68
Adele	Rolling In The Deep	65
Jewel	Foolish Games/You Were Meant For Me	65
Carrie Underwood	Before He Cheats	64

It looks like our forefathers had a wider breadth of taste in music. Most of these songs were released within

the past 15 years, which indicates that we play the same songs to death more than our predecessors.

Part B

We hit a historical low in the early 2000s in terms of diversity of music that we listened to, which isn't surprising since N-Sync, Backstreet Boys, and Britney Spears utterly dominated the music industry at that time. Again, it looks like we are getting back on track to enjoying more songs as there has been a large spike in music funneling in and out of the top charts in recent years.

Part C

Elton John is the least surprising in terms of who made it onto this list. If you look up his music on spotify or apple music, you will be amazed how many hits that man has created. I'm happy to see several country artists on this chart as it is the superior genre of music in America.

Question 3 Part A

Athletic Event	Height in cm
Athletics Women's Shot Put	191.50
Athletics Women's Heptathlon	188.70
Athletics Women's Discus Throw	188.40
Athletics Women's High Jump	188.00
Athletics Women's Triple Jump	186.90
Athletics Women's Javelin Throw	186.20
Athletics Women's Hammer Throw	183.90
Athletics Women's Pole Vault	183.00
Athletics Women's 400 metres Hurdles	181.40
Athletics Women's Long Jump	181.35
Athletics Women's 200 metres	180.00
Athletics Women's 400 metres	180.00
Athletics Women's 100 metres	179.60
Athletics Women's Pentathlon	179.00
Athletics Women's 4 x 400 metres Relay	178.00

Athletic Event	Height in cm
Athletics Women's 3,000 metres Steeplechase	176.80
Athletics Women's 100 metres Hurdles	176.00
Athletics Women's 4 x 100 metres Relay	176.00
Athletics Women's 800 metres	175.75
Athletics Women's 80 metres Hurdles	174.80
Athletics Women's 20 kilometres Walk	173.00
Athletics Women's 1,500 metres	172.00
Athletics Women's Marathon	171.40
Athletics Women's 5,000 metres	170.75
Athletics Women's 10 kilometres Walk	170.00
Athletics Women's 3,000 metres	170.00
Athletics Women's 10,000 metres	167.80

Clearly the tallest women are those that are in events that require the most physical strength. This isn't surprising as taller people are able to pack more muscle onto their frames than shorter people and, hence, the former are able to become stronger than the latter.

Question 3 Part B

Athletic Event	SD in Height
Rowing Women's Coxed Fours	10.865490
Basketball Women's Basketball	9.700255
Rowing Women's Coxed Quadruple Sculls	9.246396
Rowing Women's Coxed Eights	8.741931
Swimming Women's 100 metres Butterfly	8.134398
Volleyball Women's Volleyball	8.101521
Gymnastics Women's Uneven Bars	8.015942
Shooting Women's Double Trap	7.826238
Cycling Women's Keirin	7.756717
Swimming Women's 400 metres Freestyle	7.624818
Sailing Women's Two Person Dinghy	7.559814

Sailing Mixed Multihull	2.081666
Shooting Mixed Skeet	NA
Shooting Mixed Small-Bore Rifle, Three Positions, 50 metres	NA

Upon browsing through the data, the “Rowing Women’s Coaxed Fours” event had the highest standard deviation in history for female heights.

Question 3 Part C

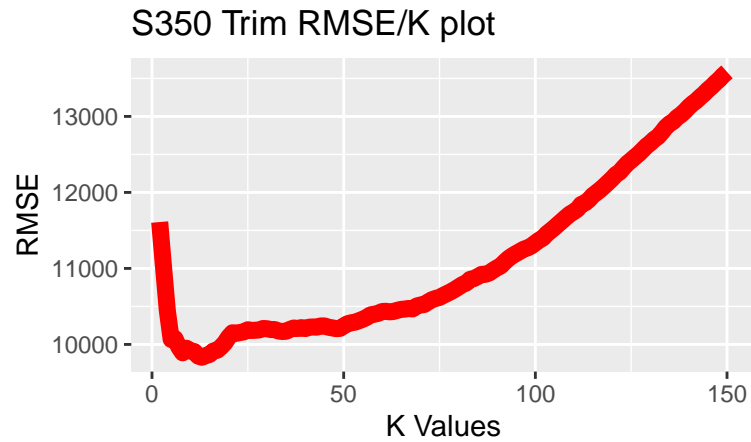

It appears to be the case that there was a greater disparity in ages of competitors as we go further into the past. Women began competing in the olympics in the 20s. From there, men were, on average, consistently older than women all the way up to about the mid 1990s. As we continue from 1896 until today, the gap in average ages seems to have shrunk and the average age range is converging to around 26 years old on average for women and 28 years old for men.

Question 4 Part

```
## [1] 10618.584 10217.221 8494.603 9963.536 10749.838 9760.819 8935.342
## [8] 9939.897 8752.473 11617.835

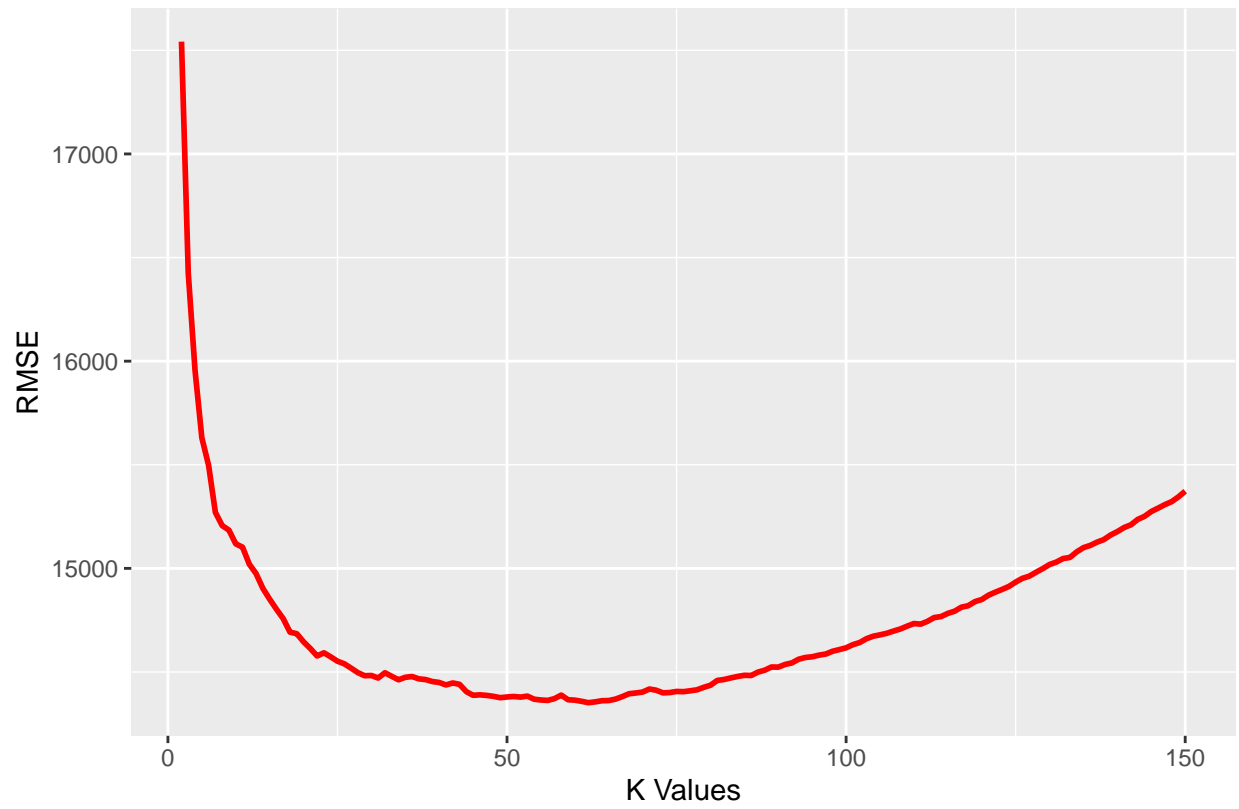

## [1] 13010.09 15448.77 14775.31 15850.43 14188.55 14412.56 14934.98 13539.22
## [9] 14338.81 14091.42
```

We'll go with $K = 13$ since the graph bottoms out between 0 and 25. Half of 25 is 12.5, so we'll round up to 13.

Clearly, the statements about a sharp loss in value the moment you drive off the lot are true as the steepest loss in value comes right after 0. After that point we see a fairly consistent downward trend in price with mileage.

S63 Trim RMSE/K plot

It appears that this plot bottoms out at about $K = 51$

We see similar behavior in this plot to what we saw in the previous one for the 350: a steep downward trend in price with mileage.

The reason the choices of K are so different for the two trims is simple: the 350 trim is represented by a dataset with far fewer observations than the 63 trim. Some say that a good rule of thumb in making a first pass at estimating the appropriate k value is to take the square root of the observations. Both of those methods were fairly close to the actual K values that we ended up choosing. I conclude that for the 350 and 63 trims, the appropriate K values are 13 and 51, respectively.
